SYSTEM 3 TYPE SELECTOR

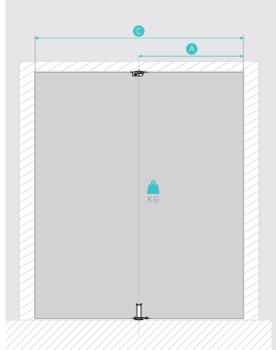

To ensure the pivot hinge provides you the appropriate door movement, FritsJurgens* has made System 3 available in four models, each tuned to the weight and the width of the door.

There are no limits to the height of the door.

For the optimum operation of the pivot door in case of particularly high doors and / or pressure differences in the building, select the next heavier System 3 variant, to ensure the closing force.

If you require a system for a pivot door that does not appear here, do not hesitate to contact us. FritsJurgens® has an on-site testing facility which enables us to determine which of our systems is suitable for your spe

- Step 1: Determine C width of the door
- Step 2: Determine A distance of rotation point to the latch $\mbox{side of the door}$
- Step 3: Determine KG weight of the door
- Step 4: Determine which system is suitable for your door

EXAMPLE

<u>Door specifications;</u> Door width 2400 mm, Door height 3200 mm, Weight 165 kg.

	1	Check the door width C	2400 mi		
	2	Determine distance to pivot point A (C: 2400 mm : 2)	1200 mr		
	3	Cross reference the weight HG	165 kg
